so, rises an enormous Catskill Delta. Off to the what has been called the a few hundred feet above landscapes below. We are just slowly turn a full 360 de- ing above what will some- years and we are hover- those almost 380 million and we have gone back - We are the mind's eyes, a name and we love to understanding of the story on the lower left. Our un- past. Take a look at our Zadock Pratt's crypt and intended to be Colonel off by visiting what was Pratt Rock are as they were when first deposited during the Devonian Pe- riod. Actually, we will start off by fisting what was us. Many side channels, or distributaries and they actually "distributed" their We hang in the air, just a few feet above its waters. We look upstream and down- stream. On this day there is only a current slowly passing by. It is a high noon on a sunny day, and we can see to the bottom. Down below what are we think about fish, but they are clumsy-looking animals, thickly armored with heavy The riverbanks are densely populated with trees. But they are also so non-imaginative. Their form and function are unique to this part of the world.

Before the fish, on the stream bottom, are scores of three-inch-long clams. They sit there, all of them facing upstream. They face into the river currents and are able to lift off bits of biologic matter. This is, for them, their means of reproduction.

The Catskill Delta lies spread out before and below the Acadiana It passes beneath us and flows through the distant Catskill Sea. We, the minds eyes, drift downwards and we approach the nearest of these distributaries: the Du Bois Creek. We hang in the air, about 30 feet above its waters. We look upstream and downstream. On this day there is only a current slowly passing by. It is a high noon on a sunny day, and we can see to the bottom.
